

MUKUL JANGRA

Full Stack Developer · React Native · 4 Years Building Products End-to-End
Delhi, India · +91 99712 65654 · mukul2021jangra@gmail.com

PROFESSIONAL SUMMARY

I build things that ship. In 4 years I've gone from crafting pixel-perfect frontends to owning the full stack — APIs, databases, CI, and mobile. I've independently designed, developed, and launched The Builder Bazar on the App Store and Google Play, handling every layer solo. At Logezy I scaled a multi-tenant SaaS platform serving enterprise clients across the UK workforce-management space. I write clean, maintainable code, move fast without breaking things, and care deeply about the product — not just the ticket.

CORE STACK

Frontend: React.js · Next.js · Vue 3/2 · Nuxt 2/3 · TypeScript · JavaScript (ES6+)

Mobile: React Native (iOS + Android) — shipped to both stores

Backend: Node.js · Nest.js · REST APIs · Socket.io · PHP

Databases: PostgreSQL · MySQL · MongoDB

Payments: Stripe · Razorpay

UI / Infra: Tailwind · Vuetify · Bootstrap · Sass · Webpack · Firebase · Git · Figma

Testing: Cypress (E2E)

EXPERIENCE

Logezy — Full Stack Developer

Jul 2023 – Present | Remote · UK Product

- Reduced UI development time by ~40% by architecting a shared Vuetify component library (Calendar Timeline), helpers, and global classes adopted across the entire product.
- Scaled a multi-tenant SaaS database layer supporting 10+ enterprise clients — zero data-bleed incidents since implementation.
- Delivered full end-to-end features spanning Nest.js APIs, PostgreSQL schema, and Vue 3 frontend — shipping independently with no handoff delays.
- Contributed to Careezy, a home-care delivery product; created reusable helpers and global classes, cutting cross-team integration time by co-owning both API contracts and frontend consumption.
- Improved platform load performance by ~25% through code-splitting, lazy loading, and Esbuild migration from Webpack on critical paths.

SOLH Wellness — Frontend Developer

Jun 2022 – Jul 2023 | Delhi

- Shipped the patient-consultant booking platform with Stripe payments and Firebase auth — live with real users within 3 months of joining.
- Built ANAH, a multilingual e-commerce site with i18n + Google Translate, achieving a 30% performance improvement and expanding reach to non-English markets.
- Drove a 35% increase in mobile user engagement by re-engineering responsive layouts with Vue.js + Bootstrap across all breakpoints.
- Sole developer for the internal Admin Panel, reducing manual ops overhead for the clinical team by ~50%.

SHIPPED PRODUCTS

The Builder Bazar

| React Native

- Solo-built from zero — zero team, zero funding: designed the product, wrote the backend, built the mobile app, and shipped to both the App Store and Google Play.
- Architected the full backend (REST APIs, database schema, auth) and a React-based admin panel independently, handling product decisions end-to-end.

- Demonstrates ability to own a product at startup velocity — concept to live users without a team.
